During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence is the entire insert of clone RP23-154F2 The true left end of clone RP23-183J6 is at 140238 in this sequence. The true right end of clone RP23-212F17 is at 93544 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       from the RPCI-23 Mouse PAC Library

constructed by the group of Pieter de Jong.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    88
```

```
cc oligonucleotide composition comprising a first oligonucleotide comprising sequences substantially corresponding to nucleotides 870-896, 851-868 or 898-917 of the vanA gene, or its complement or portion, or an 898-917 of the vanA gene, or its complement or portion, or an collectide 387-404, 406-423 or 426-446 of the vanB gene, or its complement or portion, where the oligonucleotide hybridizes under comprising one or more oligonucleotide (s) specific for a vanA gene and/or vanB gene in a test sample, comprising the oligonucleotide mentioned compose. The method and kit are useful for detecting and/or amplifying genes (i.e. vanA and/or vanB genes) in a test sample, or for identifying control of food, water, pharmaceutical proposes, such as for quality control of food, water, pharmaceutical products or other products requiring microbiological control. The present sequence represents a probe for Enteropoccus faecium vanA, which is used in an example from the

Nucleic acid sequences are used to generate universal probes and which can be used to identify and detect the presence of algal, bacterial, fungal and parasitical species in a test sample. and archaeal,

Disclosure; Page 1578; 1580pp; English.

The invention relates to a method for detecting vancomycin resistance gene vanA and/or vanB nucleic acid molecules in a sample comprising contacting the sample with a vanA- and/or vanB-specific oligonucleotide probe or primer, and detecting or determining the presence or amount of hybrid formation or amplified nucleic acid. Also described: (1) an

Detecting vanA and/or vanB nucleic acid molecules in a sample, useful for e.g. identifying vancomycin-resistant enterococcus, comprises using vanA-and/or vanB-specific oligonuclectide probes or primers.

SEQ ID NO 3; 33pp; English.

WPI; 2005-222218/23.

The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nuclei nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (1) obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexh nucleic acids are used for the specific and ubiquitous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         competitive inducer sequestration; vanH promoter; vanR gene product; Enterococcus; Staphylococcus; Streptococcus; Gram-positive bacterium; antibiotic susceptibility; ex vivo eradication; in vivo eradication;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Corynebacterium sp., Enterobacteriaceae group, Escherichia coli,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                11-AUG-2000; 2000WO-US022086
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria gonorrhoeae and Staphylococcus sp. . Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               22-FEB-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             in glycopeptide resistant enterococci. The methods of the invention are useful for reducing vancomycin resistance in a vancomycin resistant organism, particularly Enterococcus faecium and Enterococcus faecalis, but also in other Gram-positive bacteria such as Staphylococcus sp. and Streptococcus sp., to which Enterococcus faecium and Enterococcus faecalis have the potential to transfer resistance determinants. The antisense molecules are useful in the treatment of infection and colonisation by vancomycin resistant enterococci and other clinically colonisation by vancomycin resistant enterococci and other clinically

                                                                                                                                                                                                                                                                                                                                                                 identification; algal; archaeal; bacterial; fungal; parasitical; microorganism; diagnosis; translation elongation factor Tu; toxin; translation elongation factor G: RecA recombinase; resistance; catalytic subunit of proton-translocating ATPase; antimicrobial; v.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   humans; and in primary or adjuvant therapy for vancomycin-resistant enterococcal infections. The gene based strategy targets key vancomycin resistance determinants and results in restoration of vancomycin susceptibility in previously glycopeptide- resistant enterococci. Sequences AAP67036-AAP67042 represent genes of the Enterococcus faecium
                                                                                                                                                                             28-SEP-2000; 2000WO-CA001150.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        significant pathogens, and may be used for the ex vivo eradication of vancomycin-resistant enterococci from frequently colonised settings, such as intensive care units, haemodialysis units, and chronic care facilities; for the in vivo clearance of vancomycin-resistant enterococci from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     vancomycin resistance gene antisense nucleic acid into the organism, antisense oligonucleotides complementary to AAP76023-AAP76031 are particularly preferred for this purpose. The second method involves providing additional vanH promoter sequences which are not operatively

Which ca

ic acid sequences are used to generate universal probes and primers can be used to identify and detect the presence of algal, archaeal, rial, fungal and parasitical species in a test sample.

2001-245006/25

bacterial,

```
cc nucleic acids of tuf, fus, atpD and/or reck genes from which probes cc and/or primers are derived. The method comprises amplifying the nucleic cacids of determined algal, archaeal, bacterial, fungal and parasitical cc species with a combination of defined primer pairs. The method can be cc used for producing probes and/or primers for detecting one or more cc related microorganisms e.g. algae, archaea, bacteria, fungi and cc parasitics, for universal detection and for specific and ubiquitous cc detection and identification of an algal, archaeal, bacterial, fungal and cc parasitics from the invention can be used for the universal detection of any bacterial, fungal and cc using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of cc at least one antimicrobial agent resistance gene or at least one toxin cg ene. hexa nucleic acids are used for the specific and ubiquitous cc detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against cc used to design a therapeutic agent which is effective against cc used to design a therapeutic agent which is effective against cc which can be detected include Abhotrophia adiacens, Bordetella sp., cc corynebacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria cc gonorrhoeae and Staphylococcus sp. . Using DNA based tests provides faster cc an hour and improved accuracy is also achieved. Ahhoolo to Ahhoolo cc exemplification of the present invention

The present invention describes a method for generating a repertory of CC nucleic acids of tuf, fus, atpD and/or recA genes from which probes CC and/or primers are derived. The method comprises amplifying the nucleic CC acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be CC used for producing probes and/or primers for detecting one or more CC used microorganisms e.g. algae, archaea, bacteria, fungi and can be combinated in the combination of an algal, archaeal, bacterial, fungal and combinations of an algal, archaeal, bacterial, fungal and combinations are genes, family and group. A nucleic acid (I) obtained CC using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial sgent resistance gene or at least one toxin combinated to design a therapeutic agent which is effective against which to design a therapeutic agent which is effective against which to design a therapeutic agent which is effective against which is effective against gp. . Using DNA based tests provides faster CC corynebacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria gonorrhoeae and Staphylococcus sp. . using DNA based tests provides faster cresults than substrate specificity tests as results can be determined in a hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers probes which are given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 27; Page 1001; 1580pp; English.
